## Quality Hoisting Products by ELS

ELS has been providing Hoisting and Lifting Solutions for over 40 years. ELS has an excellent array of lifting devices for making difficult jobs seem easy, all sourced from trusted suppliers, all certified for the Canadian marketplace. Offerings include a variety of balancers, hoists, intelligent lifting devices and winches for standard applications through to custom integrated systems. The ELS Technical Sales team has expertise in [matching lifting applications to the right hoisting products](#).

## Why Source Hoisting Products from ELS

*[A Wide Range of Hoisting Products](#)* can be sourced from [ELS](#) which include: air and spring balancers, hoists (manual chain falls, electric chain, air driven, and electric wire rope), winches, intelligent lift assists, and rigid column manipulators.

*[Multiple Hoist Brands Can Be Sourced](#)* including Columbus McKinnon (CM), Budgit, Kito, Stahl, Demag, Chester, (and there are many more). This gives ELS the opportunity to provide the right hoist for the lifting application specified by the customer.

*[ESA Certification for Electric Powered Hoisting Products](#)* is required by law in Ontario to show the equipment is approved for use in Ontario. Electrical Safety Authority inspectors review equipment to assure it complies with the current Ontario Electrical Safety Code and when equipment is approved, ESA certifies the equipment can be used in Canada. This inspection is arranged by ELS (for both new and repaired products).

*[Custom Applications](#)* – Hoisting devices are selected based on which brand and model is the best solution for the application. Examples of custom hoisting applications are:

- Low headroom
- Long lifts
- True vertical lifts
- Synchronization of multiple hoists
- Hoisting in a hazardous environments with different degrees of risk including spark resistance
- Weather/atmosphere (corrosion) resistant
- Food/pharmaceutical grade environments

*[Gorbel G-Force and Easy Arm Intelligent Lift Assists](#)* can be sourced from ELS (the largest Gorbel dealer in Canada). These hoisting devices fill the void between manual and automated robotic solutions, by using human intelligence and adaptability for guidance while the device does the lifting. The G-Force device can be integrated into end-of-arm tooling and has programmable options. The Easy Arm is a perfect option for plug-and-play lifting solutions, allowing users to reach into work cells or around obstructions.
